
9 FAQs: Why Dealers Should Consider Strolid

1. What makes Strolid different from other BDCs or AI tools?

Strolid blends AI efficiency with trained human specialists — making us the only true AI co-pilot in automotive.

We capture and analyze every conversation, respond faster than in-house teams, and offer a human escape hatch whenever a customer needs a real person. No other solution combines people, process, AI, and conversation intelligence in one unified system.

2. How does Strolid help us sell more cars?

Strolid increases showroom traffic by:

- Responding instantly to leads
- Calling faster using our dialer
- Recovering old unworked leads with Sophia
- Surfacing real-time hot prospects from actual conversations
- Eliminating follow-up gaps that cost dealers sales

You don't need more leads — you need better follow-up. We fix that.

3. Will AI replace my staff or take control of conversations?

No.

AI handles speed, scale, and automation. Humans handle trust, nuance, and commitment.

Strolid uses AI where it helps and people where it matters, ensuring customers get fast, accurate answers without losing the relationship.

4. What insights will Strolid give me that my CRM can't?

Your CRM shows notes, Strolid *shows the full conversation*.

We make every call, text, email, and chat searchable so you can see:

- What customers are asking
- Why they're hesitating
- Complaint spikes
- Price objections
- Missed opportunities
- Patterns across rooftops

It's clarity dealers have never had before.

5. How does this reduce my operational headaches?

Strolid eliminates:

- Missed calls
- Delayed follow-up
- Poor notes
- Inconsistent BDC execution
- Staffing turnover
- Training and coaching burden
- Multi-system blind spots

You get a consistent, accountable engagement engine without the cost and chaos of doing it yourself.

6. Is this scalable for large stores or dealer groups?

Absolutely.

Strolid is designed for single rooftops *and* large groups that need:

- Standardized process
- Unified communication
- AI-enhanced reporting
- Group-level insights
- Lower operational overhead

OEMs also benefit from brand consistency and conversational intelligence across their network.

7. How do I know Strolid will represent my brand well?

Because every interaction is both human-reviewed and transparent to you in your Strolid Portal.

Our agents are trained to sound like your store, not a call center.

Our Dialer- gives them access to all of your business data

Our AI tools guide consistent process and tone, while humans step in whenever emotion, urgency, or complexity requires it.

You get speed without losing personality and transparency into every conversation.

8. What if customers ask questions AI can't answer?

This is exactly where Strolid outperforms everyone else.

AI is great for answering common questions, but only humans can guarantee price, payment, credit approval, availability, or trade values.

Strolid is built on a simple truth:

AI answers questions. Humans make promises.

The moment a customer needs a commitment, we route the conversation to the right human instantly avoiding frustration and lost deals.

9. What kind of ROI should a dealership expect?

Dealers typically see:

- More appointments from old leads
- Faster response times
- Higher contact rates
- Fewer missed opportunities
- Improved CSI
- Increased sales and service revenue

Plus: no hiring, training, turnover, or management burden. Because we unify conversations and automate the busy work, your team focuses on closing — not chasing.
