

AI-Ready Conversation Layer for Automotive Dealers

Strolid provides an AI-powered conversation layer for automotive dealers, unifying BDC, Dealer MRI, and Automotive Co-Pilot.

Confidential Investor Presentation | Vincent Micciche – Founder & CEO

The Problem

Dealers are drowning in leads and tools, not in clear answers.

Execution Gaps

- Slow or inconsistent follow-up
- Dropped calls/texts/emails
- Weak accountability

Fragmented Systems

BDCs and sales teams live across CRM, phones, chat, call tracking, inventory feeds, OEM tools — none truly unified.

Empty AI Promises

Most "AI" tools are just chatbots or auto-responders that don't learn from dealer data or adapt to their workflows.

What Dealers Really Need

A way for dealers to adopt AI as a capability on top of their own data and processes — not just another plug-and-play product.

Market Opportunity & Our Beachhead

\$0.5B–\$2B+
opportunity in
automotive

The Market

- ~17,000 franchised U.S. dealers
- Heavy spend on BDC, CRM, and CX tools
- Shift to "better conversion & experience"

Our Beachhead

- Serving ~165 dealers (1% of market)
- Recurring contracts, live data
- Target ARPU: \$50k–\$100k per rooftop
- Scale what's working to the other 99%

Strolid Today

Tech-Enabled BDC & CX Platform

\$11.5M

2025E Revenue

(Entirely bootstrapped)

- 200,000+ of monthly conversations across all channels
- Deep CRM and platform integrations
- Trusted by major dealer groups

What We Do Today

- Handle calls, texts, emails, and chats on behalf of dealers and groups
- Deep integrations with major CRMs, phone systems, chat platforms, and inventory feeds
- Internal automations and AI for intelligent routing, accelerated responses, conversation summaries and more
- Strong brand and relationships within automotive retail: large groups, OEM-aligned dealers, and independents

Our 3-Phase Evolution

Phase 1: Strolid Classic

Tech-enabled BDC + CX, focused on follow-up, appointments, and closing the loop.

Phase 2: Applications on Data Layer

Automotive Co-Pilot and Dealer MRI for analytics and decision support.

Phase 3: LLM-to-Dealer Bridge

Bridge between consumer LLM experiences and real dealers using vCon.

AI as Capability, Data as Moat

True AI Capability

A way for dealers to adopt AI as a capability on top of their own data and processes — not just another plug-and-play AI/Automation product.

- Strolid avoids vendor lock-in, preventing reliance on external data models with vCon.
- Ensures secure and compliant data management through Vconic's consent layer, mitigating data risk.
- Captures and structures all communication data, preparing it for seamless integration with any AI tool.
- Empowers dealers with full control over their data and AI capabilities, on their own terms.

The Data & Compliance Layer

Your stable data & compliance layer for evolving AI.

vCon

Open standard for representing every conversation as a single, structured object

Conserver

Ingestion, storage, routing, and enrichment for vCons

Compliance Layer

Consent tracking, logging, DOJ-aware and SCITT-aligned trust fabric

What This Means for Dealers

Benefits:

All conversational data in one place, across channels and systems

Secured, portable and compliant by design, not bolted on later

AI-agnostic: ready to feed any AI model or tool, now and in the future

Key Point:

Strolid holds the exclusive automotive license to vCon / Conserver / compliance / portal. Vconic becomes a separate infra company, while Strolid remains the stable backbone for AI on top of dealer data.

Products We're Building

Automotive Co-Pilot

Customer-facing widget on dealer's site connected to internal co-pilot for agents and staff.

Grounded In:

- Inventory, pricing, incentives
- Prior conversations and CRM data

Use Cases:

- Answer questions, pre-qualify, set appointments
- Support agents with instant context and responses
- Replaces chat, digital retailing, and trade tools

I'm here to help!

Ask me anything about our vehicles, pricing, financing, or schedule a visit. I can help with multiple questions at once.

TOPICS I CAN HELP WITH

Inventory

Warranties

TRY ASKING SOMETHING LIKE...

"Show me SUVs under \$40k"

"What would my monthly payment be?"

Dealer MRI ("Dealer Brain")

Portal and dashboard on top of vCons and BDC activity. Complies, unifies and analyses all customer communications from Co-Pilot, email, phone, text and chat.

Analytics:

- Complaint rates, price pressure, OTD requests
- Payment/credit concerns, trade-in themes
- Engagement by channel
- And more

Signals Engine:

- Save-a-deal alerts, hot leads, process gaps
- Multi-level views: agent, rooftop, group, OEM
- And More

Why Strolid Is Hard to Copy

Experience + Infra + Execution

Deep Operational DNA

Our team boasts decades of experience in retail operations, e-commerce, and BDC. This ensures we speak the language of dealers, not just SaaS.

We Already Do the Work

Our platform integrates with a real BDC/CX operation that actively handles conversations, rather than just reporting. Our AI is trained on genuine workflows and outcomes.

Exclusive Auto License

We utilize a single, structured conversation object (vCon) across all channels. Compliance, consent, and trust are fundamental to our data layer.

Bootstrapped to Scale

Strolid achieved ~\$11.5M in revenue without external capital, proving our business model. New capital now accelerates our apps and go-to-market strategies, not foundational business creation.

Business Model

Today: Services + Platform

- Per-rooftop BDC/CX contracts
- Bundled portal and reporting
- Improving margins with automation
- ~\$1.8M/year Vconic costs moving off P&L

Tomorrow: Software-Led Expansion

- Continue BDC/CX + layered software
- Co-Pilot SaaS uplift per rooftop
- Dealer MRI analytics subscriptions
- Shift to high-margin software mix

Org Plan Post-Spin

Dedicated Application Team for Strolid

Vconic (Infrastructure)

- Thomas + Vconic team focus on vCon standards, Conserver, and compliance layer
- Separate infrastructure company

Strolid (Applications)

- VP Applications Engineer
- 2-3 Full-stack engineers
- 1 Data/ML engineer
- 1 Product Manager
- 1 UX/UI designer

Shared QA/DevOps resources as needed.

3-Year Product Roadmap

1

Year 1 (0–12 months)

- Auto Co-Pilot v1 rollout
- Dealer MRI MVP launched
- Pilot & refine features

2

Year 2 (12–18 months)

- Auto Co-Pilot v2: enhanced
- Dealer MRI v2: advanced insights
- Begin SaaS GTM expansion

3

Year 3 (18–36 months)

- LLM-to-Dealer Bridge via vCon
- Expanded market footprint
- Significant software revenue

GTM Strategy

Phase 1 – Land & Expand in Our Base

Put Co-Pilot and Dealer MRI into existing Strolid rooftops. Use early adopters to create case studies and ROI proof points.

Phase 2 – Groups & Strategic Partners

Target large groups and long-term relationships (Group 1, Asbury/Lithia/Group 1). Partner with CRMs, phone/call tracking providers, chat vendors, and select OEM programs.

Phase 3 – Dedicated SaaS Motion

1–2 AEs focused on selling Co-Pilot + Dealer MRI even where Strolid doesn't run the BDC. Product marketing, content, events, and targeted outreach to high-value groups.

Team & GTM Cost Sketch

Applications & Product Team

- VP of Engineering: ~\$220k
- Engineering (2 Full-stack, 1 Data/ML): ~\$440-500k
- Product & Design: ~\$290k

Total: ~\$900k/year

GTM & Marketing

- Product/GTM Marketing Lead: ~\$145k
- Strategic AE: ~\$150k + variable
- Events, content, travel: \$250k

Total: ~\$650k/year

\$1.4-1.6M Total Annual Burn

Raise & Use of Proceeds

\$4-6M Raise

Funding 3 years of product development and go-to-market

60-70% Product & Engineering

- Apps development
- Signals engine
- LLM integrations

20-30% Go-to-Market

- Sales team (AE)
- Product marketing
- Launch & pilots

10-20% Buffer

- Working capital
- Contingencies

What Investors Get

Proven Revenue Base

A bootstrapped **\$11.5M** revenue auto CX business with strong dealer relationships and operational excellence.

Clear Growth Path

A roadmap from services to **software-led growth** with high-margin products on top of proven operations.

Defensible Moat

Exclusive automotive rights to a modern conversational data and compliance layer that competitors can't replicate.

True AI Capability

A way for dealers to adopt AI as a **capability** on top of their own data and processes — not just another plug-and-play product.
