

Sophia AI Assessment — Numa (Fixed Ops)

Mode: Light

Decision Authority: Dealer Principal (Final)

Ramp Window: 180 days

Win Definition (12 months): Increase **customer satisfaction** and **service booking show rate**.

Narrative recommendation

Numa is aimed at the right Fixed Ops pain: **missed calls, appointment scheduling, and status updates**—areas that directly impact customer satisfaction and booked work. If it reliably captures after-hours demand and reduces “where’s my car?” traffic, it can support your win metrics.

Your primary risks are **trust and control**, not features. You’ve flagged it as a **black box**, and advisor workflow changes may concentrate negative interactions (advisors become the last-stop escalation), raising burnout risk and potentially harming the very satisfaction you’re trying to improve. Proceed only with guardrails that force transparency, tight escalation controls, and explicit data-use limits.

Scorecard (0–100)

Category	Weight	Score (0–10)	Weighted Pts
AI Authenticity	20	4	8.0
Operational Fit	20	7	14.0
Resource Alignment	15	6	9.0
Transparency / Data	15	3	4.5
ROI Clarity	15	5	7.5
Risk / Exit	10	4	4.0
Change Management	5	4	2.0
Total	100		49.0

Verdict Band: <60 = **High Risk / Hype Detected** (unless guarded pilot terms are negotiated)

Vendor proof checklist (missing evidence)

- **Data use & training (in writing):** Contract addendum clarifying if/when dealership communications can be used to train/improve models; ability to opt out.

- **Explainability/QA:** Clear audit trail for why the agent responded/escalated (beyond transcripts), plus QA tooling.
 - **Xtime integration depth:** Exact supported actions (create/modify/cancel, capacity rules, advisor routing, loaners, RO linkage, etc.).
 - **Escalation + CX controls:** Hard rules for handoff to humans (repeat caller, upset sentiment, safety, warranty, price disputes, comebacks).
 - **SLA + uptime + failover:** What happens when Numa, phones, or Xtime integration fails.
 - **Compliance responsibility clarity:** Written responsibility matrix (recording/consent/TCPA-style messaging, disclosures, retention).
-

Red flags

- **Black box behavior:** Hard to predict edge-case handling; edge cases drive CSI loss.
 - **Data rights ambiguity:** “Customers are yours” but vendor may use data for improvement/training with consent.
 - **Advisor experience risk:** Advisors may become the complaint desk; burnout + reduced warmth when a human finally engages.
-

5 next questions for the vendor

1. **Training/data:** Will you contractually commit to *no model training* on our dealership’s customer communications (voice/text/chat), including derived insights—yes or no?
2. **Xtime specifics:** List the exact Xtime actions supported and what is not supported.
3. **Escalation policy:** Show the default escalation tree for upset customers and status calls—what triggers takeover and how fast?
4. **CX outcomes:** Provide comparable-rooftop results with baselines for CSI/NPS, show rate, complaint rate over 90–180 days.
5. **Exit & portability:** On cancellation, can we export all transcripts/recordings/tags/performance history, and what’s retained after termination?
