
ACTION PLAN #1 — SOPHIA OUTBOUND FOLLOW-UP (Sales)

“Recovering Unengaged Leads for Dealers”

PHASE 1 — DATA COLLECTION & INTEGRATION

Step 1 — Define “Unengaged Lead” Criteria

Sophia should ONLY call when:

- No dealer outbound activity within 72 hours
- No customer reply
- Status NOT “working,” “appointment,” “sold,” “bad,” or “do-not-contact”
- Customer is not suppressed (bad number, opt-out, etc.)

Outcome: A universal safety rule for all rooftops.

Step 2 — Build Tiered Data Ingestion Pipeline

Tier 1 — CRM API (Strategic Path)

Pull activity history, last contact dates, statuses, and opt-outs.

Tier 2 — Automated Daily CRM Export (Fastest Practical Path)

Dealer schedules an auto-export report (CSV/XML) containing:

- Lead ID
 - Last activity timestamp
 - Customer reply timestamp
 - Status
 - Contact info
- We ingest it daily.

Tier 3 — Strolid Engagement Portal (Fallback)

Dealer marks leads as engaged/not engaged manually.

Outcome: A reliable method for filtering leads before Sophia calls.

Step 3 — Confirm Suppression Logic in Strolid

- Opt-outs
- Bad numbers
- Bought elsewhere
- Not in market

Outcome: Fully compliant outbound calling.

PHASE 2 — SOPHIA OPERATIONAL WORKFLOW

Step 4 — Establish Standard Cadence

Use the same cadence that works in zBDC:

- Day 3 → First Sophia call
 - Day 4
 - Day 5
 - Day 7
 - Day 10
 - Day 15
All captured in vCon → stored in Strolid.
-

Step 5 — Set Up Callback Routing

Two choices:

1. **Dealer handles call backs**
2. **Strolid handles call backs (premium SKU)**

Outcome: Dealer-specific routing improves adoption.

Step 6 — Set Reporting Expectations

Provide dealers with:

- Calls placed

- Voicemails
- Live answers
- Appointments set
- Suppression reasons
- Opt-outs
- Recovered opportunities

Outcome: Clear value demonstration.

PHASE 3 — PRODUCT DEFINITION + PRICING

Product 1 — Lead Resurrection (One-Time Blast)

Purpose: Show quick wins from old leads.

Pricing:

- AI outbound calls: **\$0.40/call**
 - Human callbacks: **\$2.00/call**
 - Appointments set: **\$15 each** (optional)
-

Product 2 — Always-On Recovery (Recurring Follow-Up)

Your long-term revenue product.

Option A — Fixed Monthly Subscription

- \$1,500/mo (up to 1,000 leads)

- \$2,000/mo (1,000–3,000 leads)
- Enterprise pricing above 3,000

Option B — Usage-Based

- \$0.35/call
- \$2.00 human handoff
- \$10–\$20 per appointment

Option C — Hybrid (Most Likely Winner)

- \$999 base
- \$0.30/call
- Human backstop included or \$1.50/call

PHASE 4 — MARKETING & GTM STRATEGY

Step 7 — Core Messaging Pillars

1. **“We only call leads your team never reached.”**
2. **“Sophia recovers deals hiding in your CRM.”**
3. **“Customers prefer humans 50% of the time — we built that in.”**
4. **“Sophia turns old leads into new appointments.”**

Step 8 — Launch Offers

1. **Free Lead Audit**
 2. **Lead Resurrection Campaign**
 3. **Always-On Recovery Subscription**
-

Step 9 — GTM Materials Needed

- Dealer one-pager
 - Pricing sheet
 - Website landing page
 - PowerPoint slides
 - “How Sophia Works With Any CRM” diagram
 - Case study using your 8,400 → 890 → 115 appointment data
-

=====

ACTION PLAN #2 — SOPHIA INBOUND SERVICE SCHEDULER (Service)

“AI Answers Your Service Calls and Books Appointments”

PHASE 1 — DATA COLLECTION & INTEGRATION

Step 1 — Identify Service Scheduling Data Needed

Sophia must have:

- Access to service scheduler integrations (Vida provides this)
- Dealer hours, menus, RO types
- Shop capacity rules (if provided)
- Contact history (optional but preferred)

Outcome: Sophia can book accurate appointments.

Step 2 — Confirm Vida Integration Workflows

Vida provides:

- DMS/CRM connections
- Scheduling integrations
- Existing OEM-compliant workflows

Strolid adds:

- Human escape hatch
- vCon conversation intelligence
- Reporting

Outcome: Clear division of responsibilities.

PHASE 2 — OPERATIONAL WORKFLOW

Step 3 — Define Call Flow

Inbound call →

→ AI answers →

→ Identifies customer →

→ Books appointment / reschedules / answers questions →

→ Escalates to human when needed →

→ Stores vCon →

→ Pushes appointment into scheduler

Step 4 — Set the Human Escape Hatch Rules

Escalate when:

- Customer asks for a person
- Customer is confused
- Customer requests something AI cannot answer
- Complex service questions arise

Outcome: Differentiates Strolid from every other AI service scheduler.

Step 5 — Define Reporting

- Calls answered
- Booked appointments
- Transfers to humans
- Customer sentiment
- Drop/hang-up reduction

PHASE 3 — PRODUCT + PRICING

Product 1 — AI-Only Service Scheduler

- \$1,000-\$2000/month BASED ON VOLUME
- Unlimited calls
- Unlimited appointments
- vCons included

Best for: small stores or low call volume.

Product 2 — AI + Human Escape Hatch

- \$2,000/month
- Unlimited AI
- Human escalation included

Best for: medium/large service departments.

PHASE 4 — MARKETING & GTM STRATEGY

Step 6 — Messaging Pillars

1. “50% of service customers prefer a human — we built that in.”

2. **“Never miss another service call.”**
 3. **“AI answers immediately. Humans step in when needed.”**
 4. **“Book more appointments without adding advisors.”**
-

Step 7 — Key Launch Offers

- Free analysis of missed service calls
 - 30-day pilot (optional)
 - Bundle discount with outbound follow-up
-

Step 8 — Marketing Assets Needed

- Dealer-facing one-pager
 - Pricing sheet
 - GTM brochure for Vida partnership
 - Case study showing call-volume reduction + appointments added
 - Demo video
-
