

Sophia AI Solutions

Two powerful AI products designed to transform automotive dealership operations: intelligent outbound follow-up for sales and automated inbound service scheduling.

Sophia Outbound Follow-Up

Recovering Unengaged Leads for Dealers- Old leads

Sophia intelligently identifies and engages leads that haven't received dealer attention, turning dormant opportunities into active appointments. Our AI-powered system ensures no potential customer falls through the cracks while maintaining full compliance and dealer control.

Built on a foundation of smart data integration and proven sales cadences, Sophia works seamlessly with your existing CRM to recover revenue hiding in your database that no one is touching.

Appointments Set

Phase 1: Data Collection & Integration

Step 1 — Define "Unengaged Lead" Criteria

72-Hour Rule

No dealer outbound activity within 72 hours

No Customer Reply

Customer has not responded to previous outreach

Status Verification

Status NOT "working," "appointment," "sold," "bad," or "do-not-contact"

Compliance Check

Customer is not suppressed (bad number, opt-out, etc.)

Outcome: A universal safety rule for all rooftops ensuring compliant, targeted outreach.

Step 2: Build Tiered Data Ingestion Pipeline

Tier 1 — CRM API

Strategic Path: Pull activity history, last contact dates, statuses, and opt-outs directly from CRM systems.

Tier 2 — Automated Daily Export

Fastest Practical Path: Dealer schedules auto-export report (CSV/XML) containing Lead ID, last activity timestamp, customer reply timestamp, status, and contact info. We ingest daily.

Tier 3 — Strolid Engagement Portal

Fallback: Dealer marks leads as engaged/not engaged manually through intuitive interface.

Outcome: A reliable method for filtering leads before Sophia calls, ensuring maximum efficiency and dealer satisfaction.

Step 3: Confirm Suppression Logic

Fully Compliant Outbound Calling

Strolid's suppression logic ensures every call meets regulatory requirements and respects customer preferences. Our system automatically filters contacts based on multiple criteria to protect your dealership's reputation.

Outcome: Fully compliant outbound calling that builds trust and maintains legal standards.

Opt-Outs

Customers who requested no contact

Bad Numbers

Invalid or disconnected phone numbers

Bought Elsewhere

Customers who purchased from competitors

Not In Market

Customers not currently shopping

Phase 2: Sophia Operational Workflow

Step 4 — Establish Standard Cadence

Using the proven cadence that works in zBDC, Sophia follows a strategic timeline to maximize engagement without overwhelming customers. All interactions are captured in vCon and stored in Strolid for complete visibility.

Step 5: Set Up Callback Routing

Option 1

Dealer Handles Callbacks: Route interested customers directly to your sales team for immediate follow-up.

Option 2

Strolid Handles Callbacks: Premium SKU where our team manages callbacks and qualifies leads before transfer.

 **Outcome:** Dealer-specific routing improves adoption and ensures seamless integration with existing sales processes.

Step 6: Set Reporting Expectations

Provide dealers with comprehensive visibility into Sophia 's performance and impact. Our detailed reporting demonstrates clear value and ROI while identifying opportunities for optimization.

Calls Placed

Total outbound attempts and timing

Voicemails

Messages left and callback rates

Live Answers

Direct customer conversations

Appointments Set

Confirmed showroom visits

Suppression Reasons

Why leads were filtered out

Opt-Outs

Customer preference updates

Recovered Opportunities

Revenue potential unlocked

Outcome: Clear value demonstration that builds confidence and justifies investment.

Sophia Inbound Service Scheduler

AI Answers Your Service Calls and Books Appointments

Transform your service department with AI that answers every call, books appointments accurately, and escalates to humans when needed. Sophia integrates seamlessly with your existing scheduling systems to reduce wait times and improve customer satisfaction.

Built on Strolid's proven DMS integrations with Strolid's intelligent conversation handling, this solution ensures no service call goes unanswered while maintaining the personal touch customers expect.

Calls answered

Availability

Wait time

Phase 1: Data Collection & Integration

Step 1 — Identify Service Scheduling Data Needed

Sophia must have access to critical scheduling information to book accurate appointments and provide excellent customer service. Integration with Strolid provides the foundation for seamless operation.

Service Scheduler Integrations

Access via Strolid to DMS and scheduling systems

Dealer Operations

Hours, service menus, and RO types

Shop Capacity Rules

Optional but improves scheduling accuracy

Contact History

Optional but enhances customer experience

 **Outcome:** Sophia can book accurate appointments that respect shop capacity and customer preferences.

Step 2: Confirm Strolid Integration Workflows

Strolid Provides

- DMS/CRM connections
- Scheduling integrations
- Existing OEM-compliant workflows

Strolid Adds

- Human escape hatch
- vCon conversation intelligence
- Comprehensive reporting

Outcome: Clear division of responsibilities ensures smooth implementation and optimal performance from both platforms.

Operational Workflow

Step 3 — Define Call Flow

Step 4: Set Human Escape Hatch Rules

What differentiates Strolid from every other AI service scheduler is our intelligent human escalation. Sophia knows when to seamlessly transfer calls to ensure customer satisfaction.

Customer Request

Customer asks for a person

Confusion Detected

Customer is confused or frustrated

Beyond Scope

Customer requests something AI cannot answer

Complex Service

Complex service questions arise

📋 **Outcome:** Differentiates Strolid from every other AI service scheduler by maintaining the human touch when it matters most.

Step 5: Reporting

Comprehensive reporting demonstrates the value of AI service scheduling while identifying opportunities to optimize customer experience and operational efficiency.

Calls Answered

Total inbound calls handled by Sophia

Booked Appointments

Successfully scheduled service visits

Transfers to Humans

Escalations requiring personal attention

Customer Sentiment

Satisfaction scores and feedback

Drop/Hang-Up Reduction

Decreased abandoned calls
